TEMPERATURE CONTROL VALVE

1.0 SCOPE:
This specification covers the requirements of Temperature Control Valve used for regulation of seal oil flow through Plate type heat exchangers / Coolers, in single flow seal oil units, with a view to control the temperature of seal oil entering the seals in hydrogen cooled turbo generators.

2.0 Application standard:
There is no national standard pertaining to this item.

3.0 Designation:
A Temperature Control Valve shall be designated as below

3.1 On Drawings:
Material specification column : TG 60620
Description column : Temperature Control Valve
Material code column : W90414905415

3.2 On Indent:
Temperature Control Valve as per product standard number TG60620.

3.3 On Enquiries & Purchase Order:
In addition to incorporating the above information, a copy of this specification shall be enclosed.

4.0 Design and construction of Temperature Control Valve:

4.1 General:
The temperature control valve shall be suitable for tropical and humid atmosphere with ambient temperature in the range of 0-60°C.

SUPERSEDES INVENTORY NO. पुराने नंबर का इन्वेंट्री नंबर	<p>4.2 DESCRIPTION The temperature control valve shall be able to maintain a constant oil temperature and shall be suitable to be employed as a mixing valve. The operation of the valve shall be independent of oil pressure and its design shall be service and maintenance friendly. It shall be possible to replace internal parts of the valve locally, without removal of valve from the pipeline. It shall be possible to employ temperature control valve in any position.</p> <p>4.3 The temperature control valve shall be equipped with an internal, easily replaceable thermostat, which takes its flushing oil at the place of measurement (assembly location). The temperature of oil shall be transformed into another physical parameter, say expansion and changed of length (of the valve stroke). The temperature control valve shall not require any auxiliary power. At rising temperature and over shooting of temperatures the opening commences, the pipe side is raised from the valve seat and increases the flow of oil from the cooler and proportionately decreasing the flow the of oil in the bypass circuit. This change in flow of oil shall be proportional to the change in temperature of oil. Refer Fig. 1.</p> <p>4.4 The maximum overall dimension of the equipment shall be as per Fig. 2.</p>

6.2 The minimum tests/checks to be carried out on Temperature control valves as envisaged by BHEL are.

- Performance tests on the valve. (Check flow, temperature)
- Testing the chemical composition of the material of casing.
- Hydraulic test at 24 Kg/cm² for 10 minutes.
- Seat leakage test at 16 Kg/cm² for 10 minutes.
- Back seat test at 16 Kg/cm² for 10 minutes.

7.0 DOCUMENTS TO BE FURNISHED ALONGWITH OFFER (IN TWO COPIES EACH)

7.1 Cross-sectional assembly drawing with various dimensions, bill of material, mounting detail etc.

7.2 Valve catalogue.

7.3 List of spare parts.

7.4 Cleaning painting and conservation procedure.

8.0 DOCUMENTS TO BE SUPPLIED AFTER ORDER PLACEMENT

8.1 Documents for approval

8.1.1 Assembly drawing including dimensions, bill & material with specification etc.

8.2 Documents for final submission

8.2.1 Two copies of test certificates as per clause 6.2.

8.2.2 Three copies O & M manual.

स्वाधिकार एवं गोपनीय

9.0 GUARANTEE

9.1 The supplier shall guarantee trouble free and satisfactory operation of the equipment for a period of 12 months after commissioning at site or 24 months from the date of dispatch whichever is earlier.

9.2 The supplier shall repair/ replace the defective parts at his own cost during the guarantee period.
